

Glossary

For your reference, here are all the new terms we introduced in this lesson:

- **Imputing:** Filling in missing data with other values.
- **Resampling:** An operation on time series data that provides a time-based grouping with a target frequency that can be used for further aggregations.
- **Test-driven development:** Implementing tests before fully developing software to continuously validate.
- **Logistic regression:** a statistical method used for predicting a binary outcome based on one or more predictor variables.
